

# MidRealm Legal Blades

◆ Extracted from the Society Rapier Rules, Appendix 5 - Blade Types and Conventions Last updated: 18 August 2009

◆ **Society Approved Use:** L = light rapier, H = heavy rapier, C = cut and thrust rapier. Multiple letters separated by a “” indicate a blade allowed in multiple categories. Keep in mind that any blade still must pass other restrictions, such as flexibility tests and being in good condition. Anything used in light rapier must also satisfy the guard opening restrictions.

Manufacturer	Model	Sales Name	Length In Inches	Society Approved Use	MidRealm

		Buckler Size Restriction			N
		Combat Archery			N
		RBG's			Y
		Separate Authorization for Melee			N

## Society:

- ◆ **Curved Blades** – Curved blades are considered another “normal” type blade. Some manufactures sell separate curved blades and some will add a curve to their normal (straight) blades on demand.
- ◆ **Banning individual blades:** Some manufacturers have more variation in their blades than others. Keep in mind that a marshal can disallow any specific blade for safety reasons, including an extreme curve or excessive stiffness (perhaps caused by curving a straight blade or shortening a blade). Disagreements need to follow the normal appeals process for your Kingdom.
- ◆ **Experimental Blades** – There are usually some blades that are being evaluated but not fully accepted by Society yet. Kingdoms may elect to use them on an experimental basis. Full reporting of any usage is required by the KRM to the SRM. Check with your KRM to find out what is currently under consideration.

## MidRealm:

- ◆ **Epees** - Only at practice and out of kingdom
- ◆ **Alchem Safeflex Dagger** - Only the 15/6 Safeflex (the blade is glued into a noticeably wider mounting block)
